

# VIT - B MANDOLIN

## EXTERNAL MANDOLIN PICKUP

High quality double piezo disc (contact transducer).

The transducers is very responsive to top vibrations.

## FEATURES

Mandolin pickup specially made to meet all working conditions.

Matches to every Amp or console input. The Double acoustic sensor is a piezo transducer that is designed for external mount in Mandolin.

This is a passive pickup. While a preamp is not required, it is highly recommended and will improve performance, especially with long cable runs.

## INSTALATION

Installation is simple and requires no permanent alteration of your instrument.

You can install the sensors to any place along the organ's body according to your personal preference of sound, volume and hue. Using the double sensor arrangement, you install the twin sensors –system for best sound effect. This is done by adhesive the one sensor behind to the bridge and the other to any place of your choice along the musical instrument's body.

Includes a 1/4" carpenter jack that clamps to the side of the instrument and you're ready to plug in.
